Studies of First Episode Psychosis (203)

A full time postdoctoral position is available in the First Episode Psychosis Program in the Department of Psychiatry.

The position will involve cognitive, neuroimaging and neurophysiological studies of individuals with first episode psychosis conducted before and after treatment with antipsychotic medication. The aims of these studies are to investigate pathophysiological mechanisms and to investigate the effects of antipsychotic drugs on cognitive and neural system function in patients with psychotic disorders.

A Ph.D. or equivalent is required, preferably in Neuroscience or Psychology. The ideal candidate will have experience in clinical research and cognitive neuroscience, and experience working with psychotic patients. Applicants should submit a brief one-page description of research interests and plans, a resume, and contact information for three references to:
