

POST- and PRE-DOCTORAL POSITIONS at YALE UNIVERSITY in NEUROIMAGING OF MOOD DISORDERS

The Yale School of Medicine Mood Disorders Research Program has postdoctoral and predoctoral positions performing NIH- and foundation-funded multimodality magnetic resonance imaging (MRI, DTI, fMRI) research projects in mood disorders at 3T and 7T. Research includes cross-sectional and longitudinal study of effects of development, aging, gender, genetic variation, early life stress and novel treatments. The work will be performed in the context of the state-of-the-art Yale Magnetic Resonance Research Center, with exciting opportunities for bidirectional research translation with basic science laboratories and clinical research programs across the university. All candidates must have relevant neuroimaging research experience with related references. Postdoctoral candidates must have an MD or a PhD in a relevant research field and predoctoral candidates strong related coursework. Please email a CV, a cover letter with a brief statement of research interests, and names of two research supervisors willing to provide references to Dr. Hilary Blumberg at hilary.blumberg@yale.edu
