BASIC SCIENCE CO-RECRUITMENT

Assistant Professor Tenure Track

We are specifically interested in applicants who span the disciplines of neuroimmunology and behavioral neuroscience. Preference will be given to individuals who focus on models and scientific questions related to the role of inflammation in brain disorders including anxiety, depression, and schizophrenia. The OHSU community is highly interactive and productive with ties on campus to other Basic Science and Clinical Departments, as well as Research Centers and Institutes.

Behavioral Neuroscience is a thriving community of world-class investigators that collaboratively apply both of these fundamental approaches. Our department is expanding while maintaining a long tradition of research excellence with strengths in using cellular, molecular, and systems neuroscience to understand behavior and cognition.

Molecular Microbiology & Immunology comprises a cadre of interactive and interdisciplinary faculty with diverse expertise. The overall mission of our department involves research and education, while bringing together basic and translational efforts through close collaborations with the Vaccine and Gene Therapy Institute, the Oregon National Primate Research Center, and the VA Portland Health Care System as well as Providence Portland Medical Center.

To apply, please send a CV & research plan to BEHNrecruitment@ohsu.edu.

The Departments of Behavioral Neuroscience and Molecular Microbiology and Immunology at Oregon Health & Science University invite applications for tenure-track faculty candidates at the Assistant Professor level.
