## NIH Interdisciplinary Postdoctoral Training for Autism Researchers

### Program goals

- To develop independent research scientists who understand the biobehavioral complexity of autism.
- To foster behavioral and biological sciences in the context of an interdisciplinary, autism-focused research program.
- To provide primary and secondary mentoring and research experiences across multiple disciplines.
- To encourage each fellow to design and execute a research plan from inception to completion.
- This training program follows [Kirschstein-NRSA guidelines](#) ». 2T32MH073124-16
