

Clinical Scientist (PTSD)

VeraSci is a growing clinical trials company located in Durham, NC that combines innovative science and technology to advance and improve the clinical trials process for many leading pharmaceutical companies. We are looking to fill a full-time PhD-level position for a clinical scientist who will help lead studies that assess clinical symptoms and cognition in CNS disorders, specifically PTSD. Major responsibilities include helping to lead studies that assess clinical symptoms and cognition in CNS disorders, assisting in developing and validating new clinical and cognitive technologies, reviewing, analyzing and interpreting clinical and neurocognitive test data, and overseeing clinical and neurocognitive rater certification and data quality control for multi-site pharmaceutical company trials. Additional duties include assisting in designing study methods and protocols and serving as a study scientific lead. Some limited travel to US or international meetings is expected. Familiarity with clinical rating scales and cognitive assessment is essential.

ESSENTIAL JOB FUNCTIONS

- Assist in developing and implementing VeraSci's short and long range scientific and clinical goals
- Provide scientific and clinical input to study design
- Provide scientific and clinical input in the development of VeraSci proprietary tools
- Work with study sponsors and the program development team to identify clinical scales and versions appropriate for the study
- Work with the technology development team to ensure written requirements meet the study needs
- Serve as a Scientific Lead for studies as assigned
- Review, analyze, and interpret clinical and neurocognitive test data
- Oversee clinical and neurocognitive rater certification and data quality control for multi-site pharmaceutical company trials
- Create technical content for marketing and sales initiatives and give presentations to current and potential clients and other interested parties
- Serve as a VeraSci representative to the scientific community and industry
- Other duties as assigned

QUALIFICATIONS

- Doctoral degree in psychology
- Demonstrated experience in clinical and/or research settings in working with adults with neurological, mood, and/or psychiatric disorders
- Demonstrated experience in conducting assessments and administering standardized scales within a clinical and/or research context
- Scientific background which includes strong research experience in the design and implementation of human studies in neurological, mood, and/or psychiatric disorders
- Strong interpersonal, communication, facilitation and large group presentation skills
- Strong analytical and problem solving skills
- Ability to work independently and with minimal supervision
- Ability to work effectively in a small team environment
