

The Inslicht Lab at The San Francisco VA Medical Center (SFVAMC) / University of California, San Francisco (UCSF) is seeking candidates for a two-year postdoctoral fellow. Our research focuses on improving the diagnosis, treatment, and prevention of psychological and physical health issues in veterans with PTSD and have a particular interest on the impact of trauma on women's health. Ongoing research projects include: Neurobiology of PTSD; physiological, endocrine, and immune responses associated with trauma and PTSD; genomics; metabolomics; sleep; human fear conditioning and extinction; wearables and remote measurement; sex differences, ovarian aging, and menopause; cardiovascular disease risk. The candidate will have opportunities to analyze pre-collected data and disseminate findings, design new research projects, and contribute to ongoing studies.

Requirements

Applicants must have a Medical Degree (MD) or Doctorate of Philosophy (PhD) in clinical psychology. MD applicants must have completed an approved residency. For clinical psychology Ph.D. applicants, an APA accredited doctorate in clinical or counseling psychology and APA accredited internship is required. All requirements for the doctoral degree must be completed prior to the start of the fellowship year. US citizenship is required.
